SUMMARY

Cybersecurity graduate seeking an entry-level Security Engineer or SOC Analyst role, with hands-on experience in endpoint and network threat detection, log correlation, and attack analysis. Strong practical exposure to PowerShell abuse detection, brute-force authentication analysis, and web attack identification through SIEM and Python-based automation.

EXPERIENCE

INTERNSHIP

Aug 2025 - Sep 2025 | Elevate Labs

Investigated phishing emails, endpoint events, and network traffic to identify suspicious behavior in simulated SOC workflows.

Analyzed Windows Defender and network logs to detect brute-force attempts and abnormal communication patterns.

Performed web application security testing using Burp Suite and manual techniques to identify and validate SQL Injection and XSS through request-response analysis.

PROJECTS

ENDPOINT DETECTION ENGINEERING USING SYSMON | SOC PROJECT

2025 - 2026 | Self Project

Built a Sysmon-based detection lab to identify suspicious processes, PowerShell abuse, persistence activity, and anomalous network behavior.

GitHub: WINDOWS ENDPOINT MONITORING AND DETECTION LAB

TOR GUARD NODE PREDICTOR | NETWORK FORENSICS PROJECT

2025 - 2026 | Team Project

Analyzed synthetic Tor traffic and engineered features to study relay behavior and guard node prediction using machine learning.

GitHub: TOR-DEANONYMIZATION-FORENSICS-SYSTEM

WEB APPLICATION SECURITY SCANNER | WEB SECURITY PROJECT

2025 - 2026 | Personal Project

Developed a web application vulnerability scanner to identify common high-risk issues such as SQL Injection, XSS, and insecure input handling by analyzing application request-response behavior and website responses.

GitHub: WEB APPLICATION VULNERABILITY SCANNER

ACHIEVEMENTS

HACKATHON

Finalist at the TN Police Cyber Wings Hackathon, where the team presented a network forensics solution to analyze Tor exit node traffic for guard node prediction as part of onion routing research.

EDUCATION

RAJALAKSHMI INSTITUTE OF TECHNOLOGY

BACHELOR OF COMPUTER AND COMMUNICATION ENGINEERING
Expected: Current | Chennai - 600010

SKILLS

PROGRAMMING

Python (Log parsing, Security Automation)

Java

MySQL

SECURITY - TOOLS

Nmap • Burp Suite • Metasploit Framework • Wireshark • Splunk • OWASP ZAP • Gobuster • Hydra • Tenable Nessus • Git/GitHub • Zeek • ELK Stack

PLATFORMS | OS

Windows • Kali Linux

SECURITY CAPABILITIES

Endpoint detection engineering using Sysmon telemetry.

PowerShell abuse detection and analysis.

Brute-force authentication detection via log correlation.

Web application attack detection.

SIEM-based alert triage and investigation.

MITRE ATT&CK-aligned threat analysis.

CERTIFICATIONS

AWS Cloud Certification

AWS Security Encryption

Cisco Cybersecurity Essentials

GRC | Mindset, Methods, Skills

ISO/IEC 27001:2022 | Information Security Associate
